

USER INTERFACE DESIGN (CS23A34)

ROLL NO: 240701374

NAME: NIVETHA S

EXP NO 7: Develop low-fidelity paper prototypes for a food delivery app and convert them into digital wireframes using Pencil Project

Aim:

To design a food delivery application interface in tablet size layout and evaluate usability through user feedback.

Tools Required:

GIMP (GNU Image Manipulation Program), Pencil (Evolus Pencil Tool), Computer System, Google Forms.

Theory:

User Interface design improves interaction between users and applications. Tablet layouts provide more space to organize UI components clearly. Food delivery apps require simple navigation for ordering food, viewing menus, and tracking delivery. A clean and structured UI enhances user satisfaction and usability.

Procedure:

1. Open Pencil or GIMP and set canvas size to tablet resolution (1280 × 800).
2. Design Page 1 (Home Screen) with header “**FOOD DELIVERY APP**”, profile icon, and buttons like:
 - View Menu
 - My Orders
 - Track Delivery
3. Design Page 2 (Menu Screen) with:
 - Food item list
 - Price details

- “Add to Cart” button
- 4. Apply light or dark theme using suitable background and text colors.
- 5. Adjust layout with proper spacing and alignment.
- 6. Organize elements using layers or grouping.
- 7. Export designs as PNG or PDF.
- 8. Share with users and collect feedback.
- 9. Analyze feedback and identify improvements.

Observation:

Users found the tablet layout easy to navigate. Menu items were clearly visible, and buttons were simple to understand. The design helped users quickly place orders without confusion.

Result:

The designed food delivery app interface was user-friendly and visually appealing. Users preferred the simple navigation and organized layout.

Conclusion:

Tablet-based UI improves usability due to better spacing and visibility. A simple and clean interface enhances user experience in food delivery applications.
