

USER INTERFACE DESIGN

NAME: NIVETHA S

ROLL NO: 240701374

Exercise 8a – Create storyboards to represent the user flow for an online shopping app using Balsamiq

AIM:

The aim of this experiment is to construct storyboards that represent the user flow of a mobile application (e.g., an online shopping app) using the Balsamiq prototyping tool.

TOOLS USED:

- Balsamiq: <https://balsamiq.com/>
-

CONCEPTUAL WORKFLOW:

1. User Flow Definition:

The process starts by identifying key screens such as **Home, Product Details, Cart, and Profile**. These screens ensure a complete shopping experience from browsing products to purchasing and managing user information.

2. Storyboard Construction:

Wireframes are designed using Balsamiq components to define each screen layout. Elements include:

- Search bar and product list (Home Screen)
- Product image, price, and “Add to Cart” button (Product Screen)
- Cart items with quantity and checkout option (Cart Screen)
- User details and order history (Profile Screen)

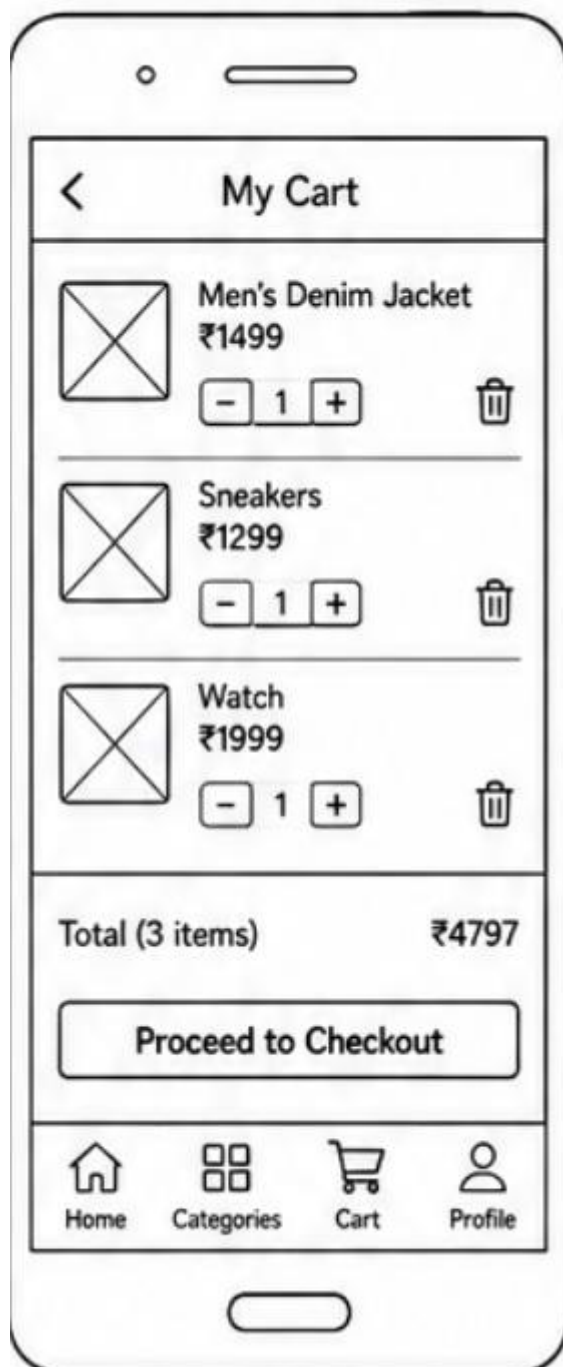

Home Screen

Product Screen

Cart Screen

Profile Screen

3. Flow Organization:

Screens are arranged based on user journey:

- User starts at **Home Screen** to browse products
 - Navigates to **Product Screen** for details
 - Adds items and moves to **Cart Screen**
 - Proceeds to checkout and manages account in **Profile Screen**
-

RESULT:

The user flow for an online shopping application was successfully visualized through storyboards in Balsamiq. The design shows a clear and logical navigation path from product browsing to purchase and profile management, ensuring a smooth user experience.
